

INFORMATION for the CT ARES DMR Repeaters 03 22 15 Code Plug.

Go to the General Settings Tab and put in your Call Sign - Name and your DMR-MARC ID # xxxxxxxx.

The "CT Alert Message" talk group is programmed into all the Ares RX Groups so that it will alert when activated.

To access the Parrot Talk group press the "8" key on the keypad and hold it until the screen changes to the Parrot talk group. You can then transmit and receive on the Parrot talk group.

It will return to the channel that you were on when you are done.

There are three State Wide Zones consisting of S Wide E, W Wide C, S Wide W. These zones contain the State Wide Talk group from each repeater in these areas. They can be placed into scan by going to the first channel in the Zone and momentarily pressing the second button below the PTT. This will place the zone into scan and a little Z will appear in the display. To take the scan off just press the same button again.

I only created three scan groups one for each State Wide Zone so that if you are traveling you can place the zone into scan to pick up the closest repeater.

I do not use scan groups other than for these zones. Scanning will consume more battery life than just monitoring a single talk group. I do use Receive Groups for each Time Slot which means that if you are monitoring a Talk groups on Time Slot 2 you will hear other talk group that also on Time Slot 2. Therefore make sure you look at the radio to see what talk group is in use. This also prevents you from transmitting on a Time Slot when someone else may be using the same time slot on a different Talk Group.

The Power level can be adjusted from High to Low by momentarily pressing the first button below the PTT on the left side of the radio. The Letter H will appear in the display when on High power and the letter L will display when on Low power.

There are 5 Regional Zones that are empty in this code plug with the exception of Region 4. Please feel free to put in your local repeaters in your Region that you can use.

This code plug was designed to allow new users the ability to get up and running with very little programming. It takes a great deal of time to make a code plug. Please feel free to use this code plug and modify it for your own use.
